PLURAL COMPONENT
There's an invisible line between ordinary performance-driven equipment and ours.

- Designed by experienced striping professionals with careful consideration given to high volume output capability, service-ability, ease of operation and dependability.
- Heavy duty construction to assure long service life and reduce overall maintenance.

Equipment features:

- High volume hydraulic and material delivery system enables simultaneous application of centerline and edgeline markings.
- Comprehensive parts and service manuals with general operation instructions, troubleshooting guide and specific systems and component information.

- Equipped with electronically controlled linear actuators for fast line width control without tools.
- Thermostatically controlled material heating system to provide accurate material viscosity control.
- Optional 3 color design available.
- Vacuum bead loading system.

- Combination English/Metric stripe control system.
- Variable mix ratios available to accommodate different plural component marking materials.
- Impingement material mixing systems to provide environmentally friendly SOLVENT FREE airless spray application.

- Safety and warning light package.
- Handgun and hose for detail marking application.
- Gun actuating solenoids protected from the elements.
and extraordinary.

Engineering and innovative design make the difference.

- Large inventory of replacement parts at factory with trained staff support.
- Expert service technicians available for operational training and quality “after the sale” support.

**The Measure of PERFORMANCE**

MRL’s patented impingement material mixing system provides an environmentally friendly, SOLVENT FREE airless spray application.

- More cost effective than hazardous waste generating mix-tube systems.
- Design compatibility for use with new, fast dry plural component products.

- Efficient resin and catalyst material load system.
- High-output utility mount air compressor.
- Material usage monitoring systems with totalizing printer.
- Color video guidance system with flatscreen monitor and video crosshair generator.
- Voice activated intercom system.
- Steel guide wheel assembly with hydraulic lift.
MRL’s Industry Leading Technology

Is offered in a POWERFUL selection of models.
